PulseX AT AN INFLECTION POINT

High-growth fitness wearables · North America · Founded 4 years ago

PRODUCT PORTFOLIO

PulseX WATCH

Multi-sport GPS fitness watch

Cost \$140 · ASP \$254

~45% GM

PulseX RING

Sleep & recovery smart ring

ASP \$200 · Best HW margin

55% GM

PulseX BAND

Chest-based HR monitor

Split pricing \$135/\$115

~33–47% GM

REVENUE MIX

10%
Enterprise

PulseAI™ — Proprietary Intelligence Engine · 75% margin

Recovery Readiness

Injury Forecasting

Overtraining Detection

Sleep Optimization

Workout Personalization

Real-time Biometrics

WHY NOW ?

WEARABLES CAGR

~12% global
North America saturating fast

AI HEALTH ANALYTICS

~26% CAGR
2x faster than hardware market

NA CUSTOMER ACQ. COST

\$95/user
vs. India at just \$40

AI SUB CHURN RATE

18%/yr
Retention is the battleground

REGIONAL CAGR OPPORTUNITY

CORE QUESTIONS

Q1 Which growth path and which region?

Q2 What GTM model to enter with?

Q3 How should PulseAI be positioned?

CORE PROBLEM |

PulseX must choose between international expansion, domestic ecosystem deepening, or enterprise AI — and identify the GTM model and PulseAI positioning that delivers a scalable, defensible, and profitable growth engine.

OUR STRATEGIC APPROACH

Q1

GROWTH PATH International Expansion

NA saturating
Emerging markets
AI tailwind

Q2

GTM MODEL Hybrid GTM

D2C
+ Gym
+ Retail
+ Multi-tier reach

Q3

PULSEAI POSITIONING Performance Differentiator

75% AI margin
Data moat
Anti-commoditisation

WHY INTERNATIONAL ?

- Growth constrained in NA due to high CAC
- Better economics abroad due to lower cost, higher volume
- Early entry builds category leadership

WHY HYBRID ?

- D2C preserves margin + data
- Gyms drive trial at low cost
- Retail builds brand trust

WHY PERFORMANCE AI ?

- Counters Garmin/Apple commoditisation
- 75% margin monetisation flywheel
- Data moat compounds with scale

INTERNATIONAL MARKET ENTRY DECISION

REGIONAL CAGR DERIVATION

Region	Wearables CAGR	Digital Health Readiness	ASP vs Global avg	Year 1 Demand	CAC
Europe	~14%	0.75 ★ highest	18%	350K units	\$81
India	~22% ★ highest	0.72	-5%	500K units	\$40
Southeast Asia	~19%	0.68	-2%	420K units	\$55
Middle East	~15%	0.61	15%	250K units	\$85
Latin America	~13%	0.55	-8%	220K units	\$50

MULTI-FACTOR SCORECARD

Region	Revenue potential	Margin quality	AI scalability	Regulatory ease	CAC efficiency	Composite
Europe	4	5	5	3	4	21 / 25
India	5	3	4	4	5	21 / 25
Southeast Asia	4	3	3	3	4	17 / 25
Middle East	3	4	3	3	3	16 / 25
Latin America	2	2	2	4	4	14 / 25

Sequencing Rationale - India first, Europe in 18 months

Both India and Europe are compelling entries and both will be pursued. They are not mutually exclusive. India scores highest on growth velocity and capital efficiency, while Europe leads on pricing power and regulatory maturity. We recommend India as the primary launch market now, with Europe following 18 months later — once PulseAI has been battle-tested at scale.

1. CAC is 2× more efficient in India

At \$40 vs \$81, the same budget acquires twice as many users in India. Going to Europe first burns twice the capital for the same device base outcome.
2. India is the fastest-growing market at 22% CAGR

India runs 5 points ahead of Europe (17%). Entering now locks in brand equity and distribution before global incumbents prioritise the market.
3. Y1 demand is 43% higher (500K vs 350K units)

More devices means more AI training data. Every 100K additional devices adds ~40K PulseAI subscribers — deepening the dataset Europe will inherit at launch.
4. Use India's 18 months to build GDPR-readiness

Europe's GDPR and MDR compliance costs run 30–40% higher than India's DPDP Act. India is the proving ground; Europe is the graduation.
5. India's data moat earns Europe's price premium

Europe commands an 18% ASP premium — but only if PulseAI is demonstrably superior to Whoop and Garmin. 18 months of Indian biometric data builds that advantage.

WHY INDIA: SCALE, SPEED AND AI LED ECONOMICS

\$9.5B

India wearables market by 2030 — from \$3.2B in 2024

23.9%

Smart wearables CAGR 2025–30 — fastest in Asia-Pacific

\$40 CAC

58% below North America — best volume efficiency of all 5 regions

Regulatory Framework

- BIS certification ensures device quality and trust.
- DPDP Act provides structured data privacy and enables AI scaling.
- Compliance creates entry barriers for smaller players.

Government Push

- Digital India Mission strengthens nationwide digital infrastructure.
- Ayushman Bharat (PM-JAY) drives healthcare access and awareness.
- Khelo India Programme promotes fitness culture and sports participation

Financial Attractiveness

- CAC around \$40 is significantly lower than global markets.
- Approximately 500K units demand in Year 1 offers high scale.
- Lower pricing is offset by strong volume.

Digital Ecosystem

- 700M+ smartphone users create a massive connected base.
- UPI ecosystem enables seamless subscription and payments.
- Low data cost drives continuous real-time tracking adoption.

Evolving Consumer Behaviour

- Post-COVID awareness increases focus on preventive health.
- Fitness tracking is shifting from luxury to necessity.
- Wearables are becoming part of daily lifestyle.

Genz Flywheel

- World's largest Gen Z cohort driving health-conscious, data-driven consumption.
- Fitness influencers enable highly shareable PulseAI-driven content.
- IPL athlete culture, urban running boom, and rising Tier 1/2 gym penetration create strong aspirational pull.

RECOMMENDED GTM : HYBRID MODEL

India Market Entry

D2C DIGITAL

- Amazon India + Flipkart + own website
- 90 - day PulseAI bundled with every device
- Influencer Marketing - with health and fitness influencers
- Highest brand control and margin retention

Gym Partnerships

- Cult fit, Gold’s Gym India, Crossfit affiliates
- In - gym demo stations + trainer endorsements
- Enterprise PulseAI dashboard for partners
- Targets core PulseX DNA: performance athletes

Selective Retail

- Croma = Reliance Digital physical presence
- Watch + Ring bundle increases basket size
- Touch and feel discovery for aspirational buyers
- Premium shelf placement only, no discounting

THE CONVERSION FUNNEL

Devices Sold
500K units

PulseAI Trial
→ 40% attach

Paid Sub
→ 200K subs

Retained Y1
→ 82% = 164K

REVENUE MIX BY GTM LAYER (India Y1 Est.)

D2C 50%

GYM 30%

RETAIL 20%

PulseX GO-TO-MARKET SYSTEM

Hybrid GTM (D2C + Gym-led) maximizes subscription adoption, retention, and long-term value.

OPTIMAL POSITIONING FOR PulseAI

Performance Differentiation is the primary positioning as it drives monetization, engagement, and retention, while Preventive Health acts as a secondary layer to expand the addressable market and improve accessibility.

Criteria	Weight	Performance	Preventive Health	Enterprise AI	Insurance
Differentiation	4	■ ■ ■ ■	■ ■	■ ■ ■	■ ■
Monetization Potential	5	■ ■ ■ ■	■ ■ ■	■ ■ ■	■ ■ ■
Scalability	4	■ ■ ■ ■	■ ■ ■ ■	■ ■	■
User Engagement	5	■ ■ ■ ■	■ ■ ■	■	■
Regulatory Complexity	3	■ ■ ■ ■	■ ■ ■	■ ■	■
Strategic Fit	4	■ ■ ■ ■	■ ■ ■ ■	■ ■	■

Performance first → Preventive health second — Who is each positioning for?

Primary: Performance Differentiator

Athletes & Biohackers

Age 18–35 · Urban · High WTP · Already pay for Whoop/Garmin. Want injury forecasting + AI coaching. Highest subscription attach rate.

Bridge Both Positioning Layers

Fitness Enthusiasts

Age 25–40 · Gym-goers · Mid WTP · Motivated by performance gains but also concerned about health longevity. Largest addressable segment.

Secondary: Preventive Health Health-Conscious

Age 35–55 · Urban professional · Preventive focus. Diabetes/lifestyle disease risk awareness. Unlocked by preventive health positioning layer.

PulseAI as Performance Differentiator — Positioning vs Incumbents

AI capability	Apple Watch	Oura ring	Whoop	Garmin	Pulse AI + Pulse X
Recovery Readiness Score	Partial	Strong	Strong	Partial	Trimodal
Overtraining Detection	✗	✗	✓	Basic	Predictive
Injury Risk Forecasting	✗	✗	✓	✗	Unique
Personalised Workout AI	Basic	✗	Partial	Basic	Dynamic
Sleep Cycle Optimisation	Partial	Best In Class	✓	Partial	Adaptive

How Watch + Ring + Band + PulseAI Creates an Unbeatable Advantage

Conclusion

Each device captures different but complementary data.

- Individually = useful
- Together = full 360° body signal

Competitors can copy hardware — not years of longitudinal, multi-source data.

Integrated devices + AI create a self-improving data loop that competitors cannot easily replicate.
